

2.2 Vertical and Horizontal Shifts of Graphs

There are various ways to transform a function.

Alterations "outside" of the function are akin to vertical transformations and act in the manner we would expect.

$$f(x) = x^2$$

$$f(x) = x^2 + 4$$

$$f(x) = 2x^2$$

Alteration "inside" of the function are horizontal movements and act in the manner opposite to what we would expect.

$$f(x) = (x + 4)^2$$

$$f(x) = (2x)^2$$

Investigation 1

On your calculator graph

$$y_1 = x^2$$

$$y_2 = x^2 + 4 \quad \text{moves up 4}$$

$$y_3 = x^2 - 1 \quad \text{down 1}$$

Sketch what you see in your notes and discuss with your group what you see.

TRY

Write the function that moves $f(x) = |x|$ down 17, graph it, show the new critical point and give the new domain and range.

$$g(x) = |x| - 17$$

Investigation 2

On your calculator graph

$$y_1 = \sqrt{x}$$

$$y_2 = \sqrt{(x-4)}$$

$$y_3 = \sqrt{(x+3)}$$

Sketch what you see in your notes and discuss with your group what you see.

TRY

Write the function that moves $f(x)=x^3$ right 6, graph it, show the new critical point and give the new domain and range.

$$g(x) = (x-6)^3$$

$$D: (-\infty, \infty)$$

$$R: (-\infty, \infty)$$

TRY

Write the function that moves $g(x)=|x|$ left 12 units, graph it, show the new critical point and give the new domain and range.

$$f(x) = |x+12|$$

$$D: (-\infty, \infty)$$

$$R: [0, \infty)$$

Ex.1

Explain how the graph of $f(x) = (x+2)^2 - 7$ is obtained from the graph of $f(x) = x^2$. Sketch the new graph using the transformations, note any key points, and the domain and range.

Left 2
down 7

D: $(-\infty, \infty)$

R: $[-7, \infty)$

TRY

Explain how the graph of $f(x) = |x-3|+9$ is obtained from the graph of $f(x) = |x|$. Sketch the new graph by hand. Give any critical points and domain and range.

Right 3
Up 9

D: $(-\infty, \infty)$

R: $[9, \infty)$

Ex.2

Given the graph of $f(x)$ below, sketch a graph of $f(x)+2$.

TRY

Sketch a graph of $f(x-1)$

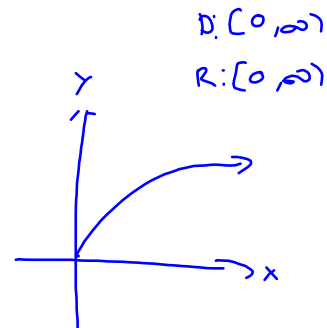

Right 1

Ex.3

Give the equation of the function graphed below.

$$f(x) = \sqrt{x+2} + 3$$

$$\sqrt[3]{x}$$
